

UX Challenge

Bureau Moeilijke Dingen X OpenAI

Group 10

Meet our team

Helena Mossel

Experience design

Amna Strojil

HCI design

Rosa van Wershoven

Inclusive design

Stefanie Zins

Social design

The challenge

Design a concept where participants are presented with hot topic items, and devise a method that incorporates a democratic process for discussing, critiquing, and considering these topics, with the goal of the output offering insights on how to improve Large Language Models (LLMs).

The challenge

Design a concept where participants are presented with hot topic items, and devise a method that incorporates a democratic process for discussing, critiquing, and considering these topics, with the goal of the output offering insights on how to improve Large Language Models (LLMs).

The challenge

Design a concept where participants are presented with hot topic items, and devise a method that incorporates a democratic process for discussing, critiquing, and considering these topics, with the goal of the output offering insights on how to improve Large Language Models (LLMs).

The challenge - Requirements

1 Practical implementation

2 Timeline

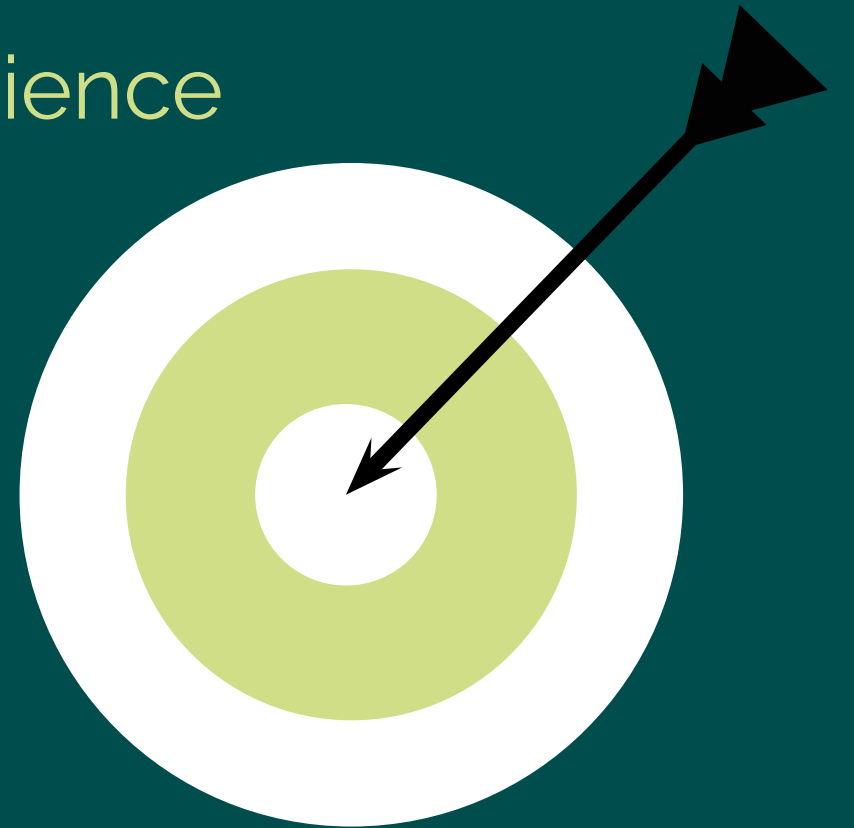

3 Scalability

4 Output helps OpenAI align values

The challenge - Focus

- **Focus point** LLM in design processes
- **Starting point** LLM in design education
- **Why?** Hot topic, relevant, experience

***“ChatGPT - Get instant answers,
find creative inspiration, learn
something new.”***

***“Artificial general intelligence has the
potential to benefit nearly every aspect
of our lives—so it must be developed and
deployed responsibly.”***

***“ChatGPT - Get instant answers,
find creative inspiration, learn
something new.”***

potential to benefit nearly every aspect
of our lives—so it must be developed and
deployed responsibly.”***

Approach - Exploratory interviews

Do you ever use AI for your design processes? Why or why not?

How do you feel when someone uses AI in design?

What do you think are the benefits of using AI in design?

What do you think are the risks of using AI in design?

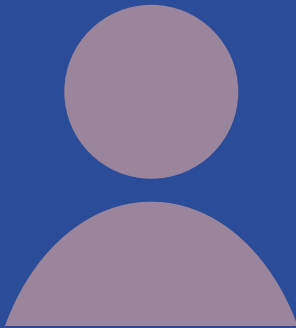

How do you think AI will play a role in design in the future?

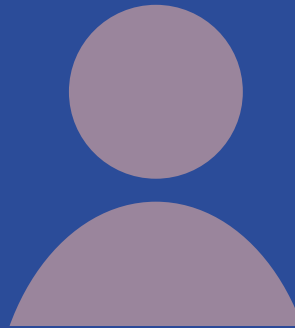

Approach - Responses (1)

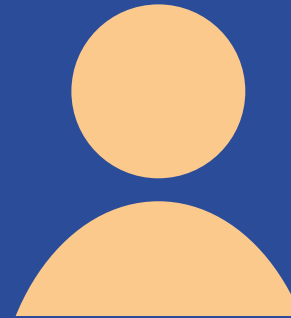

'A designer should be able to realize that they are better at designing products, and therefore use AI as an inspiration tool, not as a replacement designer.'

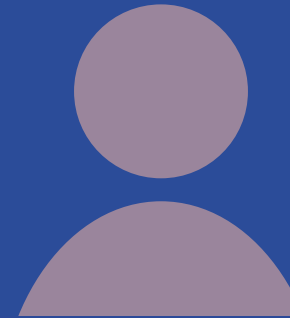

'I do use AI in times when I get stuck and need some new inspiration'

'A risk of using AI is relying on incorrect data. Or when you use it too soon, you might get stuck on an idea proposed by Ai, rather than generating original ideas yourself.'

'Its quick and interesting for research'

Industrial Design students

Approach - Responses (2)

'AI technologies offer valuable capabilities that complement and enhance traditional design processes, enabling designers to create innovative solutions efficiently and effectively. However, it's essential to balance AI-driven automation with human creativity and expertise.'

'Attitudes towards the use of AI in design can vary depending on individual perspectives, values, and priorities. While some may embrace AI as a powerful tool for innovation and efficiency, others may express concerns about its potential impact on creativity, ethics, and society'

'It's essential to approach the integration of AI in design thoughtfully and responsibly, considering ethical, social, and human-centric implications to ensure that AI serves as a force for positive change in the design ecosystem'

Dependency on AI tools and automation may weaken designers' skills and critical thinking abilities, making them less adaptable to unforeseen challenges or changes in the design landscape.

Over-reliance on AI-generated solutions may stifle human creativity and intuition, limiting designers' ability to explore unconventional or innovative design ideas.

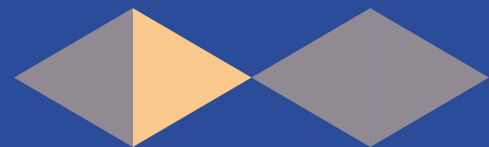

ChatGPT

Approach - Identifying values

design students value **inspiration, (*degree of*)
ownership, support, and efficiency**

Approach - Themes researched

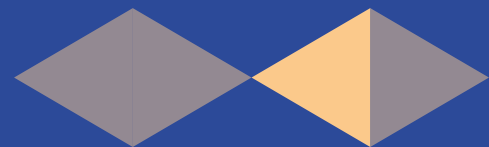

Large Language Models (LLMs)

Ethics of AI

Data collection with AI

Role of AI in Design Process

Approach - Themes researched

Solution

Solution - considerations

Limitations

Time

- 1 Day might be too short for in depth data gathering.
- But longer can be difficult to keep participants motivated.

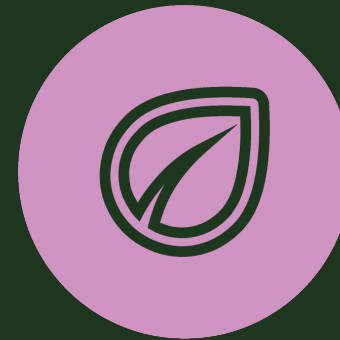

LLM Limitations

- Capabilities that the LLM has now. Possible restrictions that the capabilities may pose during the activity.

Public Knowledge and Opinions

- Not everyone is familiar with large language models.
- Ethical questions about the implementation of AI in the design process.

Environmental Impact

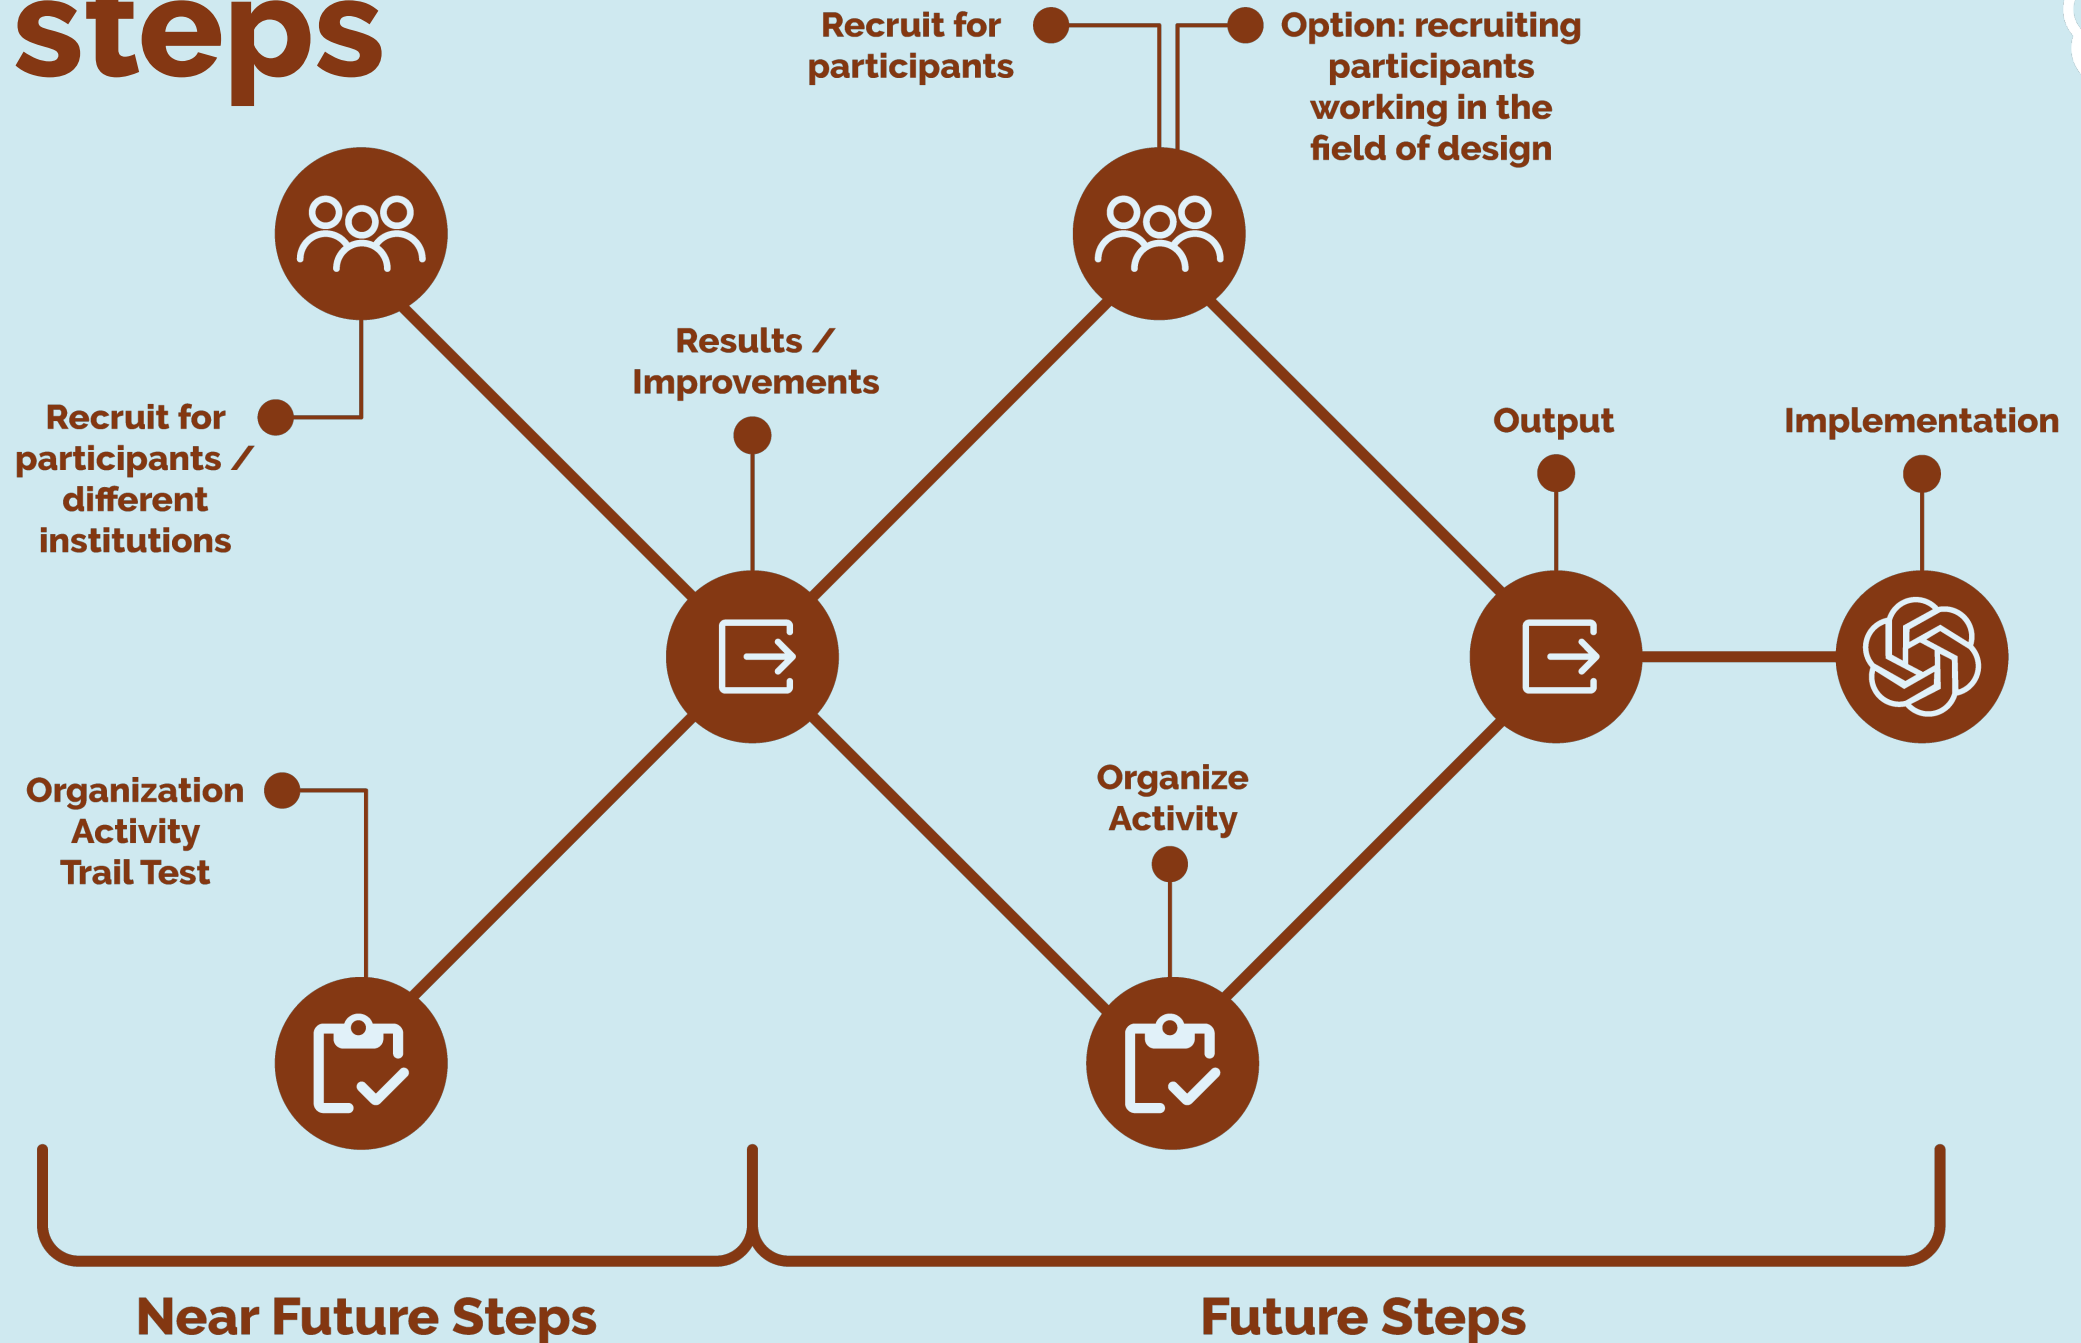

- Impact of LLM on the environment.

Transparency

- Activity's Transparency and outcome.
- Ownership of the data.

Next steps

Thank you.
